

Assignment : 15

Problem Statement : Create a serverless computing service.

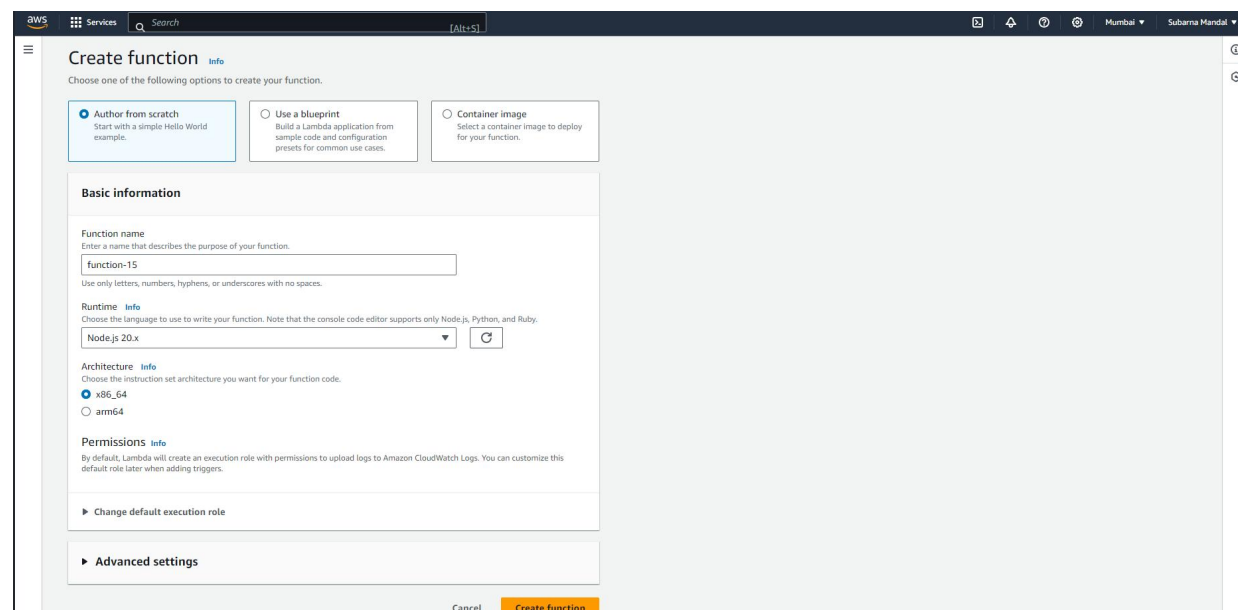

Step : 1 Please access the AWS console and use the search bar to look for "Lambda". Then, select the first option that appears in the search results.

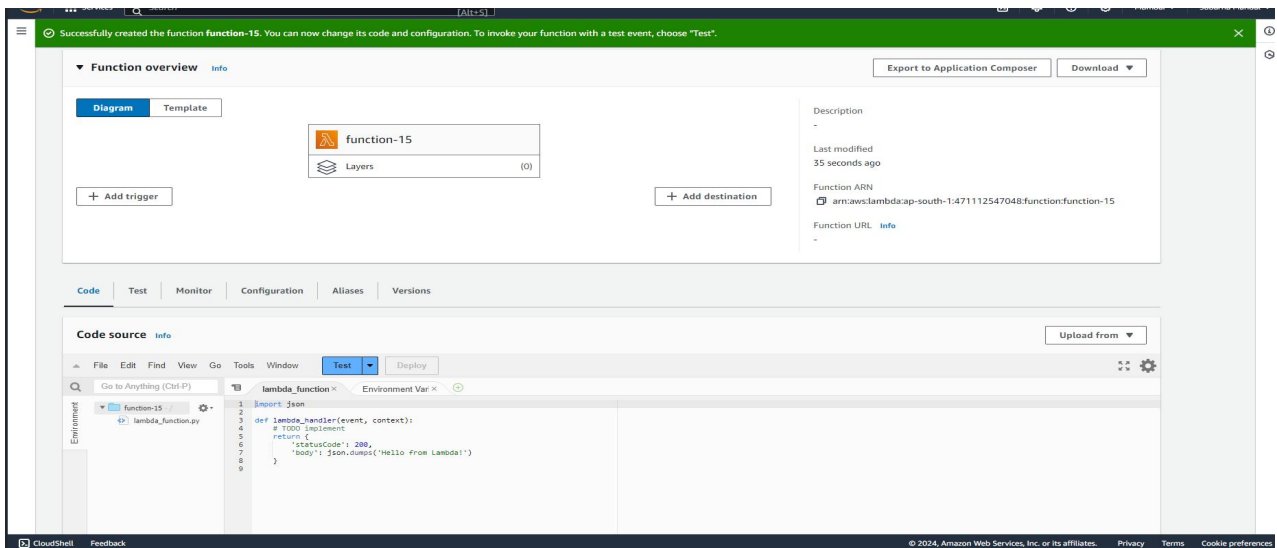

Step : 2 To proceed click on “Create a function”.

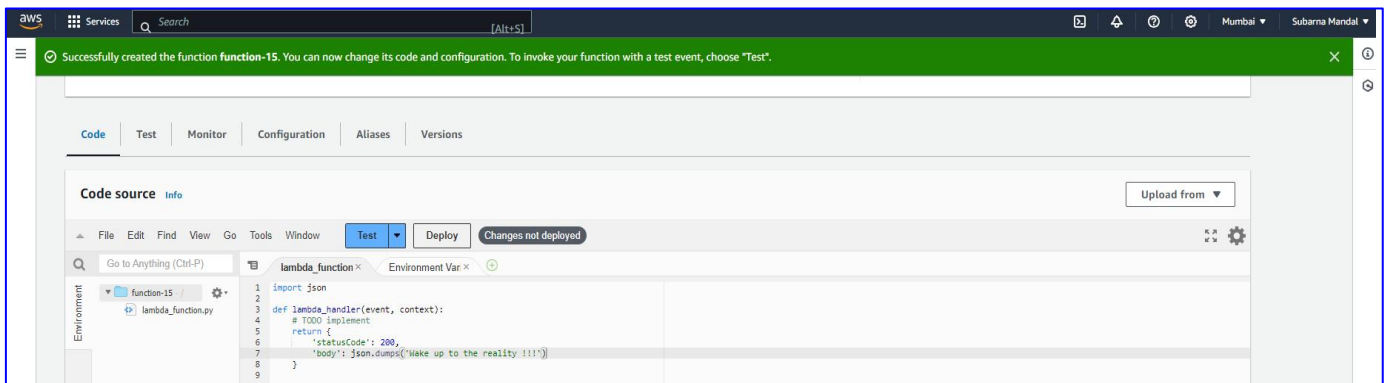

Step : 3 Please specify an appropriate function name, as "function-15" is currently being used. Without making any changes, proceed to click on "Create function" located at the bottom.

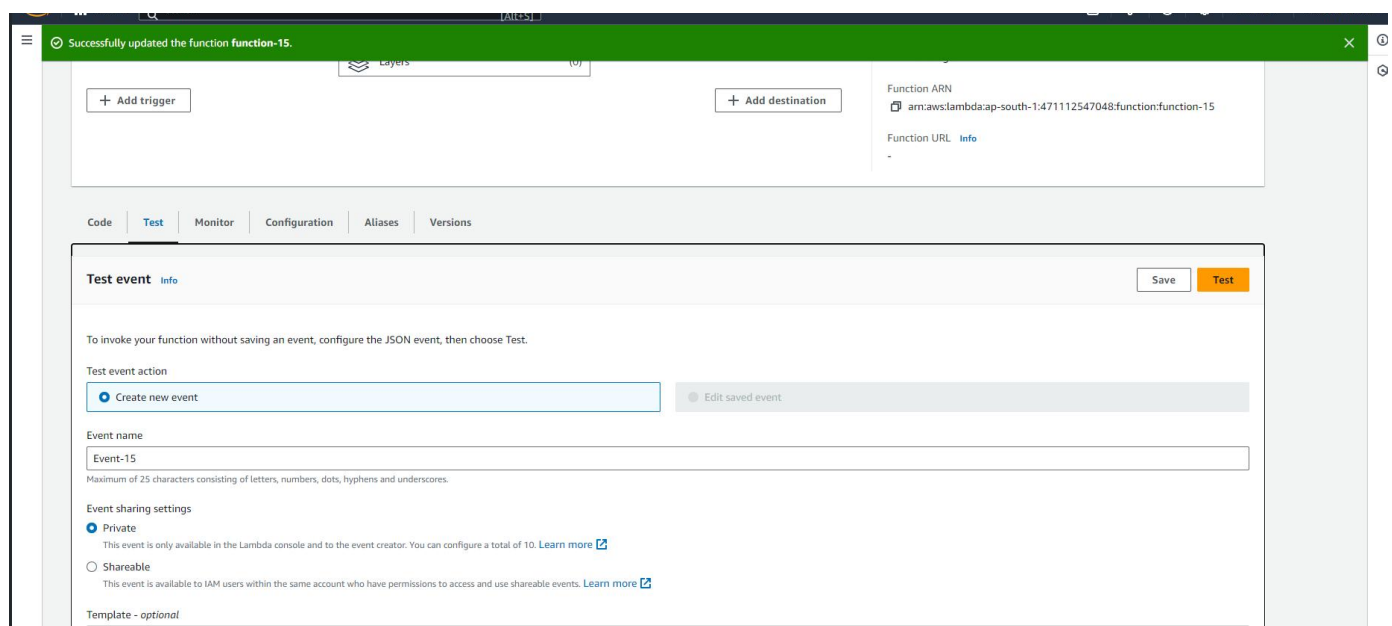

Step : 4 The function named "function-15" has been successfully created.

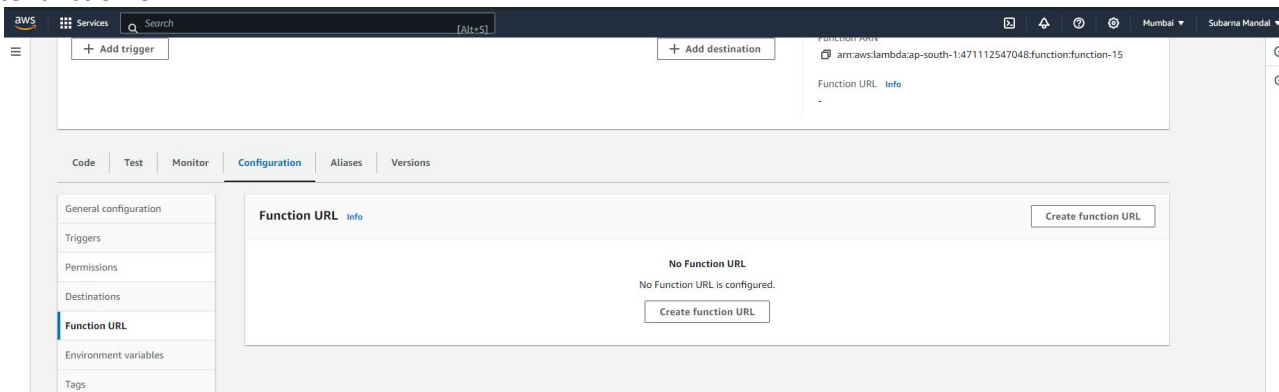

Step : 5 Next, scroll down to access the code section. Make the necessary modifications to the code, and then proceed to deploy it in order to save the changes.

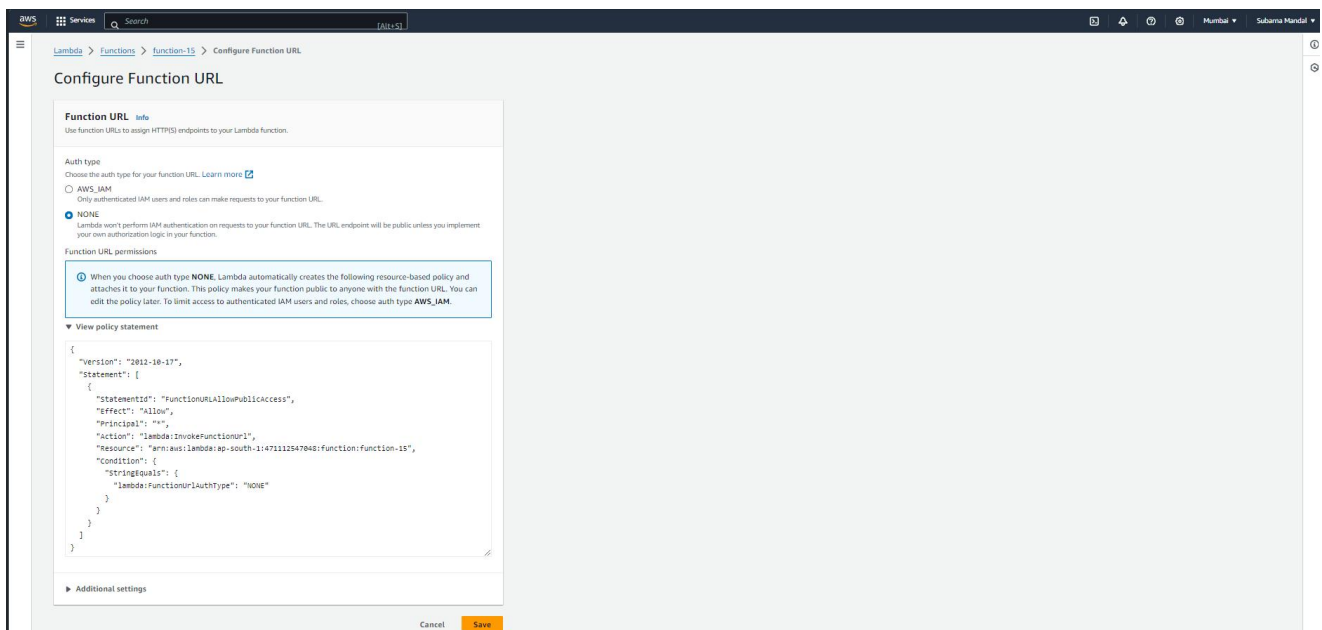

Step : 6 Navigate to the Test section, where you'll create an event. Give the event a name (for instance, "Event-15") and then select "Test" to proceed.

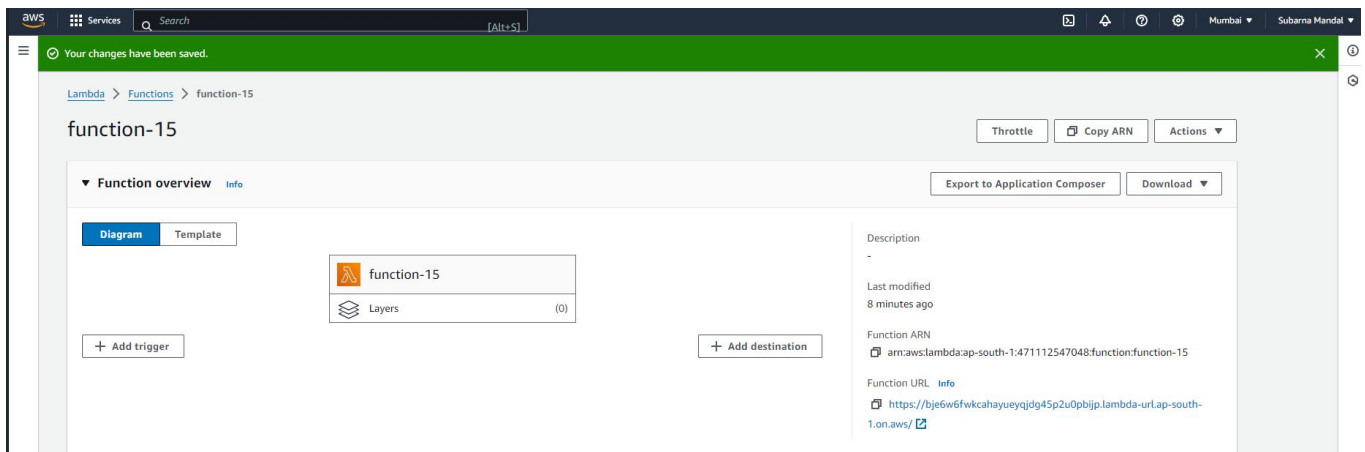

Step : 7 Access the configuration settings, and from the left panel, choose "Function URL." Proceed by selecting "Create function URL."

Step : 8 Choose "None" in the author type and Proceed to click on "Save" button.

Step : 9 Copy the function URL that has been generated in the right pane.

Step : 11 The subsequent window shows the output of the modified code.
